ANNEX C: CALCULATION FORMULA M³/LOG

Included below is the formula that will be used to calculate the amount of cubic meters for each log harvested in accordance with clause 5.2 of the Agreement and the detailed terms to that clause included in annex A.

$$V = \frac{D^2 \times L \times \pi}{4}$$

- V = volume expressed in m³
 D = Average diameter calculated by taking two measurements of diameter at each of the ends of the log. The sum of those four measurements is divided by four to calculate the average diameter.
 L = The length is the shortest distance between the two ends of the log, measured without passing over any defects in the log that could influence the total distance
